

SUNSCREEN FOR FOUR

The sun tent "Easy for Two" from Skincom can be built up in less than three minutes and it offers plenty of shade for up to four people. With a size of 320 x 150 centimetres and with a weight of only 1.7 kilograms, it is manoeuvrable enough to be quickly adjusted to the position of the sun. At the beach it keeps its shape by the sand bags that are attached and in the grass it can be fixed with tent pegs. The sun tent gives the people sitting under it a sun protection factor of 60 according to the UV standard 601.

4C-PRINTING ON A SMALL AREA

From Teca-Print comes what must be the smallest pad printing machine that uses four colour technology. After successfully introducing the Series E2 a few years ago, the product has undergone some interesting innovations. By combining the Transfert Carré TFC-I 125 and a pad sliding device, two colours can be printed at one time. But the new improvements now make it possible to print four colours in one run. And this can be done even with a high number of cycles of 800 items per hour. The manufacturer reports that all four colours are absorbed simultaneously.

LITTLE FLOWERS ON YOUR PEN

In order to have a blooming office, you don't necessarily need a flower pot. The Pencil-Flower from Siplast is an easy-care alternative. It comes in three versions and 15 colours, so that adapting the pencil to conform to a particular CI should not be a problem. The petals can have advertising messages on them. Whoever prefers a sportier version, can also have the petals replaced by a football jersey of his or her choice or by team flags. An overview of the various possibilities can be seen on the company's website.
