

TECA-PRINT-PRODUCT INFORMATION

PAD PRINTING INK TPC 350 FOR SOFT GROUNDS

The pad printing ink TPC 350 is available in a new, improved quality from now on.

Adhesion:

The pad printing ink TPC 350 is suitable for printings on soft grounds. It specially shows adhesion on the following materials:

- rubber
- leather
- imitation leather
- polyamide (PA)
- polyurethane (PUR)
- elastomers (TPE, Santoprene)

Processing:

The processing of the TPC 350 has been improved due to modifications at the resin base. The TPC 350 shows less cobwebs (splashing) in the new quality.

Opacity / HD ink tones:

As the opacity of the TPC 350 often has been criticised, the whole range of standard ink tones of the TPC 350 is now available in high density ink tones. The high density ink tones replace the former ink tones.

Technical information sheet:

The technical information sheet of the TPC 350 has been modified corresponding to the above mentioned changes. Please find the modified document attached to this product information.
