

RA CLEANING AGENT

Effective immediately, the RA cleaning agent complements the wide range of cleaners for the most various applications at Teca-Print.

The new RA cleaning agent is specially suitable for the manual cleaning due to its characteristics. Its cleaning efficiency is extremely intense. The RA cleaner showed the highest cleaning efficiency in our trials and the comparison to other Teca-Print cleaning agents.

Until now, only a product with a substance risky for health and environment (Toluol) has been available as cleaning agent for manual cleanings with a good cleaning efficiency.

The RA cleaner does not contain any substances which are classified as very dangerous and fulfils the conditions for the conformity of pad printing inks and its additives concerning the restriction of so-called substances of very high concern (SVHC), to which has been attracted notice in connection with REACH.

RA cleaning agent: The new hand cleaner with the highest cleaning efficiency.

All in all, the RA cleaning agent convinces by its unproblematic handling. It is cleaning efficiently, does not smear and is evaporating very fast. The flash point is $< -20^{\circ}\text{C}$.

The RA cleaning agent is available in different trading unit sizes. Please find the part numbers and the content of it in the list below:

Part-number	Description	Content
F99 00031 4	RA cleaning agent	1 liter
